Hardcover – 327

ISBNs:

eBook - 979-8-9936326-1-2
Paperback 979-8-9936326-0-5 and 979-8-9936326-3-6
Hardcover 979-8-9936326-2-9 and 978-0-9835180-9-9

Publication Date: March 10, 2016

Synopsis: An ancient historian and an archaeologist are pulled into a covert government conspiracy to assassinate a key historical figure. Jack Carter and Victoria Heath travel through time hoping to prevent a mistake that would alter history forever.

Formats: eBook, Paperback, Hardcover, and Hardcover with Dust Jacket

Available from: Amazon, Barnes & Noble, Book-A-Million, iTunes, and IngramSpark.

Review:

This book sounds like Indiana Jones mixed with a lot of sci-fi, and honestly that's an awesome combo. I like how it starts with the archaeology but then it quickly turns into this big mystery involving secret government programs and quantum physics. It feels smart without sounding boring, and the whole modern object in an ancient shipwreck idea really hooks you. If you like thrillers with history, science, and lots of twists, this seems like a really fun and intense read. *Kira Jones*

"Flashback" by Gary A. Nilsen surprised me in the best way because science fiction usually is not my go-to read. But hear me out... this one pulled me in with the mystery and suspense that I kept wanting to know what was really going on. The mix of archaeology, secret government programs, and quantum physics gave the story this intriguing "wait... what?" energy that kept things interesting the whole time. I especially enjoyed following Victoria and Jack as they unraveled the puzzle piece by piece. It was an enjoyable, easy-to-get-into sci-fi read that balanced mystery and intrigue really well. If you want a read outside of your usual genre, then pick this one up. *OooLaLa Reads*

If you're looking for a book that feels like you've accidentally stumbled into a high stakes episode of The X Files mixed with Indiana Jones, Gary A. Nilsen's Flashback is going to be right up your alley. Because it does give Indiana Jones goes to a secret government black site, which I absolutely love and why it kept me hooked. The story kicks off with Dr. Victoria Heath, an archaeologist that finds something that absolutely shouldn't at an ancient shipwreck. Then teams up with Dr. Jack Carter, a history professor who holds the missing piece of the puzzle, and from there, the book just hits the gas. What I really liked about Flashback is the blend of genres. You start off thinking you're in for a thriller, but Nilsen quickly pivots into quantum physics and shady government conspiracies. It sounds like a lot to juggle, but once the mystery starts unraveling, the "impossible" nature of the tech they're chasing makes for some really cool, mind bending scenarios. The chemistry between Victoria and Jack keeps the story grounded. It's not just tech babble and running from bad guys but they actually have to figure out how their respective fields of study can fit into this massive, decades long cover up. It's paced well, not too slow, but it gives you enough room to try and guess the ending before the final chapter. It gives you that satisfying sense of thrill and mystery that keeps you turning pages at 1 AM. If you like stories where the history books are wrong and the government is hiding something secret in a lab, you'll have a blast with this.
